## PROFESSIONAL SUMMARY

First-Class Cybersecurity graduate from the Institute of Accountancy Arusha (GPA 4.55/5.0) blending offensive security expertise with AI engineering. Specialized in securing LLM implementations, architecting AI platforms, and automating complex security workflows. Proven track record of deploying local AI infrastructure (LlamaTerm) and exploiting prompt injection vulnerabilities through adversarial manipulation. Positioned to deliver high-impact results across **AI Platform Engineering, MLOps, Security Automation, and Cybersecurity (Offensive Security)**.

## TECHNICAL SKILLS

**Cybersecurity:** LLM Security, Cybersecurity (Offensive Security), Vulnerability Assessment, Network Reconnaissance, Security Automation, Linux Hardening.

**AI & Automation:** Local LLM Deployment (Ollama), Adversarial Prompt Engineering, AI Workflow Automation (n8n, Activepieces), API Integration, MCP Tooling.

**Tools:** Nmap, Wireshark, Burp Suite, Metasploit, ELK Stack, Hexstrike MCP, Docker, Claude Code, Codex, Hermes Agent, n8n.

**Programming:** Python, LangChain, LangGraph, Java, Bash/Linux Shell, C, Git, HTML/CSS, JavaScript.

## KEY PROJECTS

### LlamaTerm | AI-Enhanced Linux Terminal — GitHub

- Architected a local LLM pipeline to provide real-time Bash syntax correction and command optimization.
- Reduced CLI friction for power users by integrating local models to interpret and fix terminal errors instantly.

### Currior Anomaly Workflow | AI-Driven Detection — GitHub

- Developed an automated anomaly detection pipeline integrating local AI models with external data streams.
- Implemented custom logic for identifying system irregularities using AI-powered analysis.

## EXPERIENCE & RESEARCH

**AI Security Research | PromptTheFlag** **2026**

*LLM Vulnerability Analysis*

- Successfully bypassed LLM guardrails across all 7 levels of PromptTheFlag.
- Employed advanced adversarial techniques, including **context overloading, character modification, obfuscation, and Base64 encoding**, to execute direct prompt injections and manipulate model behavior.

**Cybersecurity Field Work | IAA** **2025 – 2026**

*Institute of Accountancy Arusha*

- Executed advanced penetration testing labs on Hack The Box, successfully compromising **Hard and Medium-difficulty machines**.
- Participated in high-intensity CTFs (Nullcon), applying network reconnaissance and exploitation methodologies. Write up

## CERTIFICATIONS

**eLearnSecurity Junior Penetration Tester (eJPT)** Certificate Link **2026**

*INE Security*

**AI 101: Fundamentals** **2026**

*TCM Security*
